

LOGISTICS EXCEPTION CONTROL

One exception. Ten working days.

A written-only, synthetic-data exercise for supervised workflow decisions.

10 OCT 2026 / NON-BINDING BUYER DISCUSSION SHEET

INDICATIVE SCOPE	THE BUYER QUESTION
USD \$6,500 Two weeks / 10 working days. Excluding applicable taxes.	When order, inventory or returns records disagree, what can an AI-assisted workflow suggest, what needs human review, and what must be blocked?

Proposed delivery - one isolated, non-critical workflow

DAYS 1-2 / DEFINE	Buyer identifies one recurring exception, process owner and fictional sample; agree expected decisions and pass/fail criteria.
DAYS 3-5 / MODEL	Prepare a small synthetic fixture set, clear decision boundaries and a reproducible offline test setup.
DAYS 6-8 / TEST	Run normal, discrepant, malformed and scripted approval/rejection cases; report observed outcomes and failures.
DAYS 9-10 / REPORT	Provide written evidence: case results, limitations, unresolved gaps and next-stage go/no-go recommendation.

What the buyer can verify

- **Case evidence.** Each fictional case records expected and observed decisions; mismatches and unrun cases are disclosed.
- **Review boundaries.** Allow / review / block outcomes and malformed inputs, with scripted approvals labeled as simulated.
- **Safe scope.** No customer credentials or production writes. This is not a deployable warehouse integration.

Current technical basis and limitations

BOLT is an internally tested **macOS prototype**. Logistics evidence uses **14 fabricated events** and five isolated Swift handoffs with mocked providers and scripted decisions. There is no customer deployment, WMS/ERP integration, real human approval, certification or proven ROI. The public browser example is separate deterministic JavaScript.

Three things we need by email: (1) One recurring non-critical exception and its desired outcome; (2) its process owner and budget contact; (3) confirmation that fictional inputs and written-only collaboration are acceptable.

Written contact: hello@unfire.technology | unfire.technology/pilot

No calls, video meetings, visits, confidential data, live system connections, customer personal data, equipment control, promised ROI or SLA. Start date, IP, payment, tax, liability and supplier eligibility require a separate written agreement and Spanish SEPE/AEAT/TGSS review. No work or deposits are authorized by this sheet.
